

Force Balanced Expansion Joint

Force Balanced EX-TEND; Series 0212F0B, 12 inch Expansion Joint with Flange End Connections

Features and Applications:

- Nominal Pipe Sizes 4 inch through 24 inch
4 inch through 16 inch is Rated at 350 PSI
18 inch and up is rated at 250 PSI
- For Ductile Iron, Steel, PVC, or HDPE pipes
- Expansion unit will NOT impart a thrust force while under hydrostatic pressure
- Designed to give Expansion/Contraction needs to protect pipeline systems from linear movement.
- Constructed of ASTM A536 Ductile Iron
- Each unit tested to rated working pressure prior to shipment
- 8 in. of linear travel on sizes 4 in. - 12 in.
10 in. of linear travel on sizes 14 in. - 18 in.
12 in. of linear travel on sizes 20 in. - 24 in.
- Due to the design of the seals, no periodic maintenance is required
- End connections:
Flange; 4 inch through 24 inch
Mechanical Joint; 4 inch through 24 inch
- Flange outlets conform to the dimensional requirements of ANSI/AWWA C110/A21.10 (class 150) with the addition of an O-ring gasket which is provided to ensure a watertight seal
- Mechanical Joint end connections conform to the dimensional requirements of either ANSI/AWWA C111/A21.11 or ANSI/AWWA C153/A21.53 depending on size.
- EX-TEND assemblies are suitable for direct burial. Polyethylene wrap is provided with each unit. If installed in a vault, the design must be such that movement is not impeded. Refer to *Connections FT-2* found at www.ebaa.com.
- NOT for use on pipelines containing solids or debris.

For use on water pipelines subject to hydrostatic pressure and tested in accordance with either AWWA C600, C605, or ASTM D2774.

Sample Specification

1. Expansion joints shall be installed in the locations indicated on the drawings and shall be manufactured of ductile iron conforming to the material requirements of ASTM A536 and ANSI/AWWA C153/A21.53. Foundry certification of material shall be readily available upon request.
2. Each expansion joint shall be pressure tested prior to shipment against its own restraint to a minimum of 350 PSI for 4-inch through 12-inch. A minimum 2:1 safety factor, determined from the published pressure rating, shall apply.
3. Each expansion joint shall have 8-inches minimum expansion. The expansion fitting shall not expand or exert an axial imparting thrust under internal water pressure. The expansion fitting shall not increase or decrease the internal water volume as the unit expands or contracts.
4. All internal surfaces (wetted parts) shall be lined with a minimum of 15 mils of fusion bonded epoxy conforming to the applicable requirements of ANSI/AWWA C213. Sealing gaskets shall be constructed of EPDM. The coating shall meet ANSI/NSF-61.
5. Exterior surfaces shall be coated with a minimum of 6 mils of fusion bonded epoxy conforming to the applicable requirements of ANSI/AWWA C116/A21.16.
6. Polyethylene sleeves, meeting ANSI/AWWA C105/A21.5, shall be included for direct buried applications.
7. Manufacturer's certification of compliance to the above standards and requirements shall be readily available upon request. The purchaser (or owner) shall reserve the right to inspect the manufacturer's facility for compliance. All expansion joints shall be The Force Balanced EX-TEND as manufactured by EBAA Iron, Inc. Eastland, TX., U.S.A.

This Sample Specification is available as a Microsoft® Word Document at www.ebaa.com/products/flex.

Important Notes

When connecting a Force Balanced EX-TEND to HDPE pipe, a flanged end connection is required. This is to be joined to a fused flange adapter on the HDPE pipe. A filler flange between the two gaskets is necessary to assure proper seal contact.
